

## SKILLS

HTML5 • CSS3/SCSS • JAVASCRIPT(ES6) • REACT/NATIVE • JQUERY • GIT • WEBPACK/NPM • PHP  
UI/UX DESIGN • ADOBE XD • ADOBE PHOTOSHOP

## EXPERIENCE

### ForceBrands - *reference available* New York, NY

Front-End Developer  
May 2019 – Jan 2020

- Developed and designed a job board app using React and SCSS to showcase open opportunities from multiple client companies. Collaborated with a remote back-end developer to build the API that serves the necessary data for the app.
- Rebuilt and redesigned the ForceBrands Newsroom blog from the ground up. Worked closely with the digital strategy and editorial team to define functionality and expectations. Learned WordPress theme development in the process. Used vanilla JavaScript and designed using Adobe XD.
- Helped double the daily number of applicant signups by redesigning the login/signup experience to be more user friendly. Worked closely with the digital strategy team.
- Create new pages for the ForceBrands website. Required working with existing HTML, CSS, and JavaScript code.

### JWiz Marketing Solutions - *reference available* Kew Gardens, NY 11415

Front-End Developer & Designer  
Jan 2018 – May 2019

- Developed and designed a web tool that improved the corrections process of advertisement graphics by allowing the proofreader to highlight and correct mistakes using mouse and keyboard instead of pen and paper. Used JavaScript canvas API to allow highlighting image sections. Has been used to proofread and correct the ads of over 700 clients.
- Rebuilt and redesigned the Manhattan Bridge Capital website and digitized the loan application. used vanilla JavaScript for dynamic input fields, signature, and client-side form validation.
- Developed and designed a CMS to easily manage press releases on Manhattan Bridge Capital website. Leveraged the use of the JavaScript library 'CKEditor' to easily style text and add HTML tables to press release articles.
- Trained and oversaw an intern for 2 weeks who helped reformat the invalid HTML code of over a hundred press release articles that needed to be transferred from plain HTML files to a database.
- Developed and designed the Referral Service landing page. Created a dynamic design that appeals to specific businesses with relatable colors, images, and fonts. Made it easy for future developers to target new businesses by storing configurations in JSON format. Removing the need to duplicate CSS code.

### Luminal Website Builder & Template Personal Project

Front-End Developer & Designer  
April 2014 – Dec 2018

- Developed and designed a website builder that allows users to drag and drop elements in any location, edit text, change colors, and build entire multi-page websites through a user interface without writing or editing code. Leveraged the use of 3rd party JavaScript libraries such as jQuery and jsZip.
- Developed and designed a highly customizable HTML5 template that can be used to create websites that are also interactive, browser-compatible, and responsive. Designed it to be customizable using the website builder.
- Wrote detailed documentation that guides users through anticipated issues.
